

Flying Geese Tree Block for Australia

Written by Yvette Chilcott

Finishes at 12 1/2 inches

You need 3 colours, cream for the background, green for the trees, and a scrap for the trunk.

I make my geese the "4-at-a-time" way, starting with a goose (green in this case) square 7 1/4 " and four sky squares that are 3 7/8". If you need a tutorial I have one available upon request. (You'll have 1 unused flying goose for another project.) (These finish at 3 1/2" x 6 1/2" each.

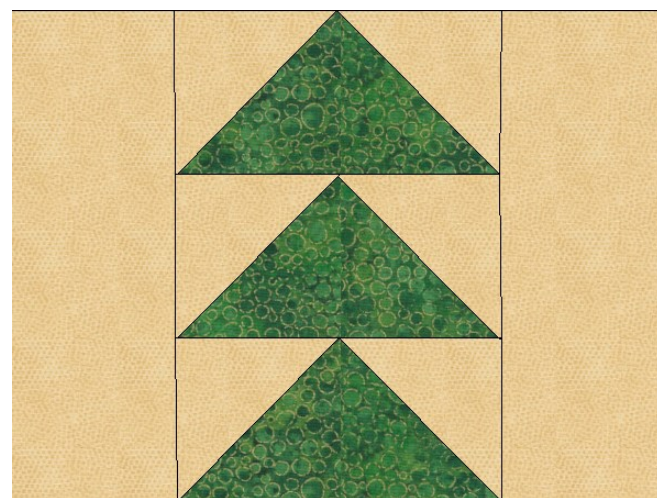

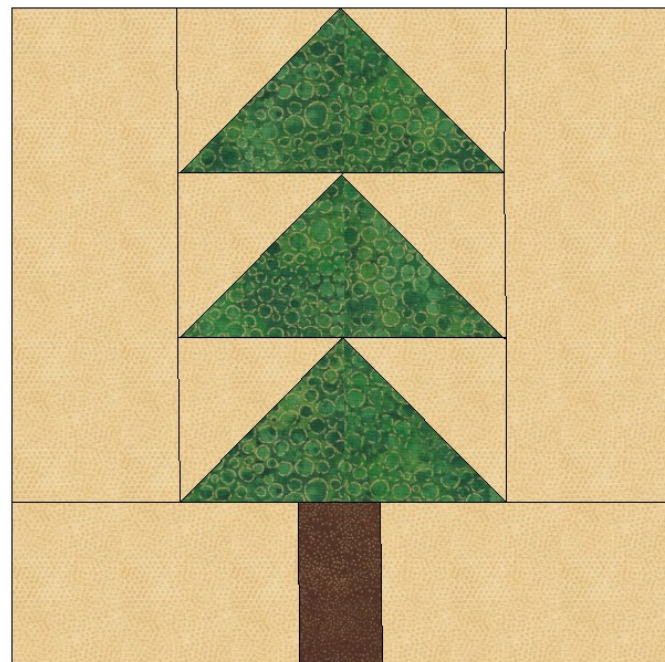

Join 3 geese units to make the tree. It should measure 9 1/2" high and 6 1/2" wide. Press the seams away from the point.

From the cream cut 2 pieces 3 1/2" x 9 1/2" and 2 pieces 3 1/2" x 5 3/4".

From the brown cut 1 piece 3 1/2" x 2".

Sew 1 of the 9 1/2 inch long pieces to each side of the tree unit. Press seams away from the trees.

Press seams away from the trees.

Sew the brown strip between the short ends of the 5 3/4" strips, press seam toward the brown.

Sew the trunk strip to the bottom of your tree, press the seam down toward the trunk.

Your block should finish at 12 1/2". If it doesn't, check that seam allowance!
